

按下 `Vgextend`

例:`vgextend sys /dev/hda9`

當出現下列情況:

`No physical volume label read from /dev/hda9`

`/dev/hda9/ not identified as an existing physical volume`

`unable to add physical volume '/dev/hda9' to volume group 'SYS'.`

就要用指令 `pvcreate /dev/hda9`

加大 lv(debian3.0testing)

25/7/04 by np2clinuxgroup

先打 `fdisk` check 個 partition

打 `df` check 個 free space

然後打 `lvextend -L +50M /dev/sys/usr` 加大個 lv

用 `xfs_growfs /usr` 實行個上個的指令

如果沒有顯示 `successful` 代表唔夠 vg

請加大 vg 再重複上述的步驟

然後打 `df` 再 check 個 free space
